

Prince Valentine Obiero

Data Science Student | Aspiring Data Analyst / ML Engineer

Kenya | princevalentine879@gmail.com | +254 718 778 005 | LinkedIn | GitHub

PROFESSIONAL SUMMARY

Data Science undergraduate with strong skills in data analysis, machine learning, and financial analytics. Experienced in building projects involving predictive modeling, AI applications, financial analytics platforms, and data visualization using Python and modern data science tools. Passionate about applying data-driven solutions to business and financial problems. Seeking a Data Analyst / Data Science internship to gain industry experience and contribute to real-world analytics projects.

WORK EXPERIENCE

Atlas Capture — Data Annotation Specialist

1 year

- Labeled images and videos to support the training of AI and machine learning models, ensuring accuracy and consistency across large annotation batches.
- Applied detailed project guidelines to classify and tag visual data, maintaining high quality standards for downstream model training.
- Reviewed and validated annotated datasets to catch labeling errors and improve overall data quality before delivery.

EDUCATION

Meru University of Science and Technology — BSc in Data Science

Expected Graduation: 2028

Moringa School — Data Visualization Program (Part-time)

Expected Completion: August 2025

CERTIFICATIONS

- Data Visualization — Moringa School (In Progress)
- Machine Learning A-Z: AI, Python & R + ChatGPT — Udemy (2026)
- Python & ML for Financial Analysis — Udemy (2026)

TECHNICAL SKILLS

Programming: Python, R, SQL

Data Analysis: Data Cleaning, Exploratory Data Analysis (EDA), Statistical Analysis

Machine Learning: Supervised Learning, Neural Networks, Clustering, Reinforcement Learning

Data Visualization: Matplotlib, Seaborn, Plotly, Tableau, Excel

Libraries & Tools: Pandas, NumPy, Scikit-learn, TensorFlow/Keras, GeoPandas, Git, GitHub

SELECTED PROJECTS

QuantEdge – Financial Analytics Platform

Developed a financial analytics platform for analyzing stock data and testing investment strategies.

- Implemented modules for portfolio analysis, CAPM calculations, and stock predictions
- Integrated machine learning models for financial forecasting
- Built tools for trading strategy backtesting and financial data visualization

GitHub: <https://github.com/Star-obiero/quantedge-api>

AI Financial Personal Chatbot

Built an AI-powered financial assistant chatbot capable of answering finance and investment questions.

- Integrated Groq API for natural language processing
- Designed chatbot to provide financial insights and investment guidance
- Implemented conversational AI for personal finance assistance

GitHub: <https://github.com/Star-obiero/Financial-Chatbot>

Food Security Analysis in Karamoja, Uganda

Geospatial data analysis project providing NGOs with actionable insights on food insecurity across the Karamoja region of Uganda.

- Analyzed sub-county level crop yield data (maize & sorghum) and merged with geospatial boundaries using GeoPandas

- Identified underperforming districts and hidden food insecurity hotspots through EDA and spatial analysis
- Built an interactive Tableau dashboard to visualize crop yield distributions and support NGO resource allocation decisions
- Delivered targeted recommendations for diversifying crops, boosting productivity per hectare, and improving food security interventions

GitHub: <https://github.com/Star-obiero/Food-security-in-karamoja-area>

Microsoft Movie Industry Analysis

Performed exploratory data analysis to evaluate Microsoft's potential entry into the movie production industry.

- Analyzed box office performance, ratings, and genre trends
- Built visualizations to identify key success factors in film production
- Presented insights using Python data visualization tools

GitHub: <https://github.com/Star-obiero/Microsoft-Movie-Analysis>

Customer Churn Prediction using Neural Networks

Developed a machine learning model to predict customer churn using artificial neural networks.

- Implemented ANN models using TensorFlow/Keras
- Performed data preprocessing, feature scaling, and model evaluation
- Built a binary classification system for customer retention prediction

GitHub: <https://github.com/Star-obiero/Customer-Churn-Prediction-using-Artificial-Neural-Networks>

Mall Customer Segmentation Analysis

Performed unsupervised machine learning to segment customers based on spending behaviour.

- Implemented K-Means clustering and hierarchical clustering
- Identified distinct customer groups for targeted marketing strategies
- Generated insights using Python data analysis libraries

GitHub: <https://github.com/Star-obiero/Mall-Customer-Segmentation-Analysis>

ACTIVITIES

- Member — Machine Learning & AI Club, Meru University of Science and Technology
